

Redwood Kingdom Game

Play
This

Cut out these animal cards and see whose animal trumps as a predator, defense, rarity, and camouflage. To get a full set of instructions on how to play and to download more animals and the advanced Endangered Card and Connect, Restore and Protect Card, visit SaveTheRedwoods.org/redwoodgame.

Yellow-Spotted Millipede

When the yellow-spotted millipede senses danger it curls into a ball and releases a sweet almond scent of hydrogen cyanide. It is a toxic chemical which can harm anything that might want to eat the millipede. Its bright yellow spots should be a warning, Stay Away!

Predator: 2
Defense: 10

Rarity: 3
Camouflage: 1

Coho Salmon

Salmon live in both freshwater streams and the salty sea. They are born and die in the same stream and spend time in the ocean getting fat off tasty fish, eels, squid and shrimp.

Predator: 4
Defense: 3

Rarity: 8
Camouflage: 4

ENDANGERED

Black Bear

Black bears can be found scooping salmon from rivers or clawing at redwood trunks. These bears love to strip away the bark of young trees to get to the sugary wood just underneath. They can weigh 100-200 pounds and can be blond to brownish in color.

Predator: 5
Defense: 9

Rarity: 4
Camouflage: 2

California Red-Legged Frog

The California red-legged frog is California's state amphibian. You can find this frog near ponds and streams. It eats insects and even small fish, mice and other frogs. It captures its food by sticking out its long sticky tongue and pulling it into its mouth.

Predator: 4
Defense: 4

Rarity: 8
Camouflage: 6

ENDANGERED

Wandering Salamander

The wandering salamander lives more than 100 feet up in the branches of redwood trees. They eat ants, mites, beetles and small isopods. These salamanders don't have lungs or gills but breathe through their skin.

Predator: 3
Defense: 2

Rarity: 7
Camouflage: 9

Banana Slug

Banana slugs are the largest slug in North America! They make a slime to help them move and protect them from predators. They breathe from a hole in the side of their head and use teeth on their tongue to eat their food.

Predator: 1
Defense: 6

Rarity: 2
Camouflage: 0

Marbled Murrelet

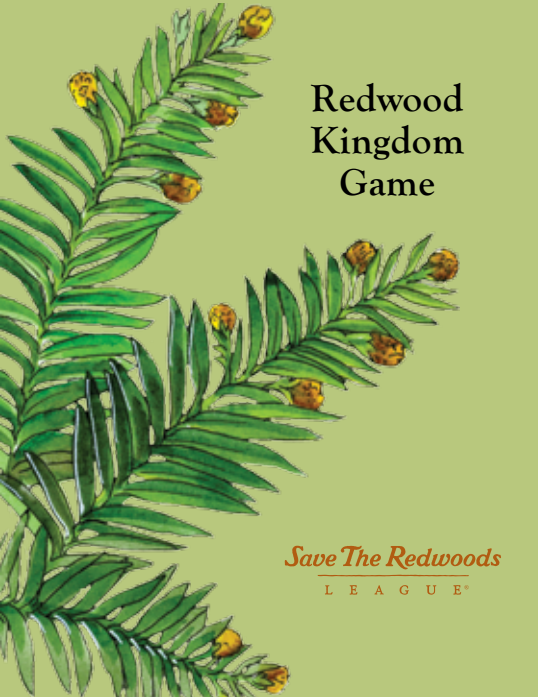

Marbled murrelets live most of their life at sea diving underwater for fish. They fly many miles to make nests in redwood trees that are more than 200 years old. This small, chunky bird has lost a lot of its habitat due to logging of old-growth trees.

Predator: 6
Defense: 1

Rarity: 9
Camouflage: 8

ENDANGERED
